PROJECT IDENTIFICATION:

PROJECT NAME:

Research Publication Submission System

SYSTEM REQUEST:

Project Sponsor: University Scientific Research Council & Academic Publishing Deanship.

Business Issue / Problem Statement:

- Severe delays in paper peer-review workflows, taking up to 6–12 months for single manuscript evaluation.
- Manual email-based submission tracking leads to lost research drafts, missing reviewer feedback, and communication errors.
- Difficulty in matching submitted research papers with domain-specific peer reviewers.
- Lack of integrated electronic payment gateways for manuscript processing charges (MPC) and publication fees.

Business Needs:

- Automate manuscript submission, blind peer-review assignment, and editorial decision workflows.
- Provide transparent real-time tracking for researchers regarding manuscript statuses.
- Streamline publication fee collection and journal indexing management.

Business Requirements:

- Web portal for researchers to upload PDF manuscripts, cover letters, and supplementary data.
- Automated reviewer recommendation system based on research domain and keywords.
- Double-blind peer-review management portal with scorecards and revision upload tools.
- Integrated secure online payment gateway for publication fees (Visa/Mastercard, Fawry).
- Digital publishing dashboard for volume/issue release, DOI generation, and PDF downloads.

Business Value:

- 40% reduction in manuscript evaluation and publication cycle time.
- 50% increase in research submission volume due to streamlined user experience.
- 100,000 EGP saved annually in printing, postal mailings, and administrative overhead.
- Enhanced university journal ranking and international research indexing.
